

Download the provided zip file containing the application or project

Step 2: Extract the Zip File

Right-click the zip file and select "Extract All" to unzip the contents to a folder.

Step 3: Open the project in your Code Editor

Open your preferred code editor (e.g., Visual Studio Code). Use "File"->"open Folder" and select the folder where you extracted the files.

Step 4: Install Required Dependencies

If the project requires any dependencies, open the terminal or command prompt in your code editor and run the required installation command.

Step 5: Run the program

Once the dependencies are installed, run the project using the appropriate command.

Step 6: Find the IP Address

Look the terminal or command prompt for the IP Address or local server address that program provides once it starts running.

Step 7: Open the Web Browser

Open a web browser, and type the provided IP address into the address bar.

Step 8: View the Output

You should now be able to view the landing page or output generated by the program.

INSTALLATION

1. Open Visual Studio Code to access and work with the project files.
2. Run the code within Visual Studio Code to execute the program.
3. Note the IP address provided by the program after it starts running.
4. Open a web browser and enter the provided IP address in the address bar
5. View the landing page that display the output generated by the program.
